

## Caldera voted BEST RIP by IMAGE REPORTS UK

Caldera has just been awarded the prestigious “Angel RIP of the year” by the IMAGE REPORTS MAGAZINE Editors. The “Angel Awards” are given out by IMAGE REPORTS journalists to the industry’s best products.

Caldera’s modular GrandRIP+ is a super-assisted production tool, says the company. GrandRIP+ adds more productivity and quality control for large format colour print production. Whatever your signage says Caldera, GrandRIP+ can professionally handle the job, and you keep the same colour rendering, even for very large outputs. GrandRIP+ provides spot colour support via its CXF library and also incorporates multi-printing routines such as step and repeat, Nest-0-Matik nesting and multi-printer spooling. Automatic nesting is integrated into the file manager and automatically optimises the space used on the media.

The tiling module is implemented in a wizard to speedily complete advanced tasks. The RIP also makes for easy finishing, for example, by marking tiles to add grommets, stitch, fold or margin marks.

GrandRip+ is compatible with TIFF, JPEG, PSD, EPS, PDF formats and more. The software is easy to use driving several printers simultaneously, with full control over which machine prints

what and the easy ability to switch designated jobs to other queues. Prior to installing Caldera, Ferrari struggles daily with more than five different RIPS and their differing management options. It allowed the printer to consolidate to one-RIP, increasing throughput and quality across a host of printers including three Vuteks, a Scitex XLJET+, an Inca Columbia, a dye sublimation fabric transfer system, two Lambdas, a LightjetXL, multiple Epson proofers and an iCut router.
